Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Graphite Epoxy Composites competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Graphite Epoxy Composites (GECs) are high-performance composite materials made by embedding graphite fibers (a form of carbon fiber) into an epoxy resin matrix. The graphite fibers provide exceptional strength and stiffness, while the epoxy resin binds the fibers together and protects them from environmental damage. These composites are known for their excellent strength-to-weight ratio, corrosion resistance, dimensional stability, and fatigue resistance. They are commonly used in aerospace, defense, automotive, sporting goods, and high-end industrial applications where lightweight and high strength are critical. The fiber orientation, volume fraction, and curing process significantly affect the final mechanical properties of the composite. Graphite Epoxy Composites (GECs) are high-performance materials characterized by a matrix of epoxy resin reinforced with graphite (carbon) fibers, typically containing a fiber volume fraction of 55-70%. These composites exhibit excellent mechanical properties, including tensile strengths of 600-1500 MPa and moduli up to 180 GPa, along with high compressive and shear strengths. They offer low density (around 1.5-1.6 g/cm³), high thermal stability with glass transition temperatures ranging from 120°C to 230°C, and thermal conductivity of 5-15 W/m·K along the fiber direction. The materials are typically processed via autoclave curing or vacuum bagging, with curing temperatures between 120°C and 180°C. The performance can be tailored through fiber orientation, resin type, and processing conditions, making GECs ideal for aerospace, automotive, and structural applications requiring lightweight yet strong and stiff components.

The global Graphite Epoxy Composites market size was estimated at USD 7394.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
