Abstracts

Graphite felt for flow battery electrode is a porous material made of carbon fiber. It has high conductivity, high specific surface area, good chemical stability and thermal stability. Its porous structure is conducive to the penetration of electrolyte and the diffusion of ions. It is mainly used as an electrode material in flow batteries (such as all-vanadium flow batteries, new bromine flow batteries, zinc-bromine flow batteries). It has the functions of separating electrolytes and cathodes, acting as a flow regulator, and controlling the transmission of reactants. Graphite felt controls the transmission of reactants through surface tension, so that the reaction rate of the battery can be controlled, thereby achieving energy storage effect. With the continuous advancement and innovation of technology, the performance of graphite felt will be further improved and optimized, providing strong support for the development of flow batteries.
