Abstracts

Graphite furnace atomic absorption spectrophotometer (GFAAS for short) is a high-precision instrument for analyzing metal elements. The graphite furnace atomic absorption spectrophotometer uses graphite furnace technology and absorption spectrophotometry to quantitatively analyze the content of metal elements by measuring the absorption of light of specific wavelengths by metal elements in the sample. The instrument is mainly composed of sample heating system, absorption system, optical system and signal detection system, among which the graphite furnace is the core component, which is used to perform high-temperature treatment on the sample, so that the metal elements in the sample evaporate, atomize and concentrate in the graphite tube for subsequent spectral analysis. Graphite furnace atomic absorption spectrophotometer technology is constantly upgrading, developing towards higher sensitivity, lower detection limit and faster speed. The application of new high-performance hollow cathode lamps, high-sensitivity detectors and other technologies has improved the stability and life of the light source, reduced the cost of use, and improved the detection accuracy and efficiency. The technological innovation of graphite furnace atomic absorption spectrophotometer continues to promote market development. Advances in light source technology, detection technology, automation and intelligence have enabled product performance to continue to improve and meet a wider range of application needs. In addition, with the improvement of environmental awareness and the continuous growth of market demand, the application of graphite furnace atomic absorption spectrophotometer in environmental monitoring, food and drug safety and other fields will be more extensive. At the same time, the expansion of the international market will also bring more business opportunities to enterprises. In summary, the graphite furnace atomic absorption spectrophotometer market is showing a rapid growth trend at the current stage, and will continue to maintain a good

development momentum in the future.

The global Graphite Furnace Atomic Absorption Spectrophotometer market size was estimated at USD 237.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
