Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Graphite Rotor and Shaft competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of graphite rotors and shafts reached 420,000 units, with an average selling price of \$350 per unit. Graphite rotors and shafts are widely used as sealing and transmission components in high-temperature and high-pressure environments, primarily in pumps, compressors, and agitators in the chemical, petroleum, metallurgical, and food processing industries. Their excellent wear resistance, corrosion resistance, and thermal expansion resistance enable them to perform exceptionally well in harsh environments. Upstream raw materials primarily consist of natural graphite, artificial graphite, and other composite materials, with major suppliers including GrafTech, SGL Carbon, Mersen, Nitto Denko, and Toyo Tanso. Downstream customers include petrochemical, metallurgical, chemical, power equipment manufacturers, and automotive manufacturers, with representative clients including Shell, BP, Mitsubishi Heavy Industries, GE, and Huawei. Global production capacity is approximately 4.2 million units per year, with an average industry gross profit margin of 22%. Upstream graphite materials account for 40% of total costs, while downstream demand from the chemical and petroleum industries accounts for 65%. In the future, with the promotion of industrial automation, green energy technology and the increasing demand for high-temperature/high-pressure equipment, the application areas of graphite rotors and shafts will be further expanded and develop towards higher performance, longer life and low cost.

The global Graphite Rotor and Shaft market size was estimated at USD 147.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90%

during the forecast period.
