Abstracts

CVD Susceptor is a graphite substrate used in the CVD process. During the CVD process, the susceptor is used to support and heat the reactants, promote the chemical reaction, and deposit the required materials on the substrate surface. CVD Susceptor is usually made of high temperature stable graphite material, which has good thermal conductivity and high temperature resistance. Graphite Susceptor for semiconductor equipment mainly includes CVD SiC coated graphite Susceptor and TaC coated graphite Susceptor. From the perspective of product application, graphite tantalum carbide coatings are currently mainly used in graphite devices, such as graphite crucibles and graphite bases. It is to achieve smooth coating and uniform heating of the wafer; while the process links of terminal applications are mainly SiC single crystal growth and SiC/GaN epitaxy. TaC coated graphite devices have high technical content and high cost, and the market demand is not as high as that of CVD SiC. According to various surveys, in view of the current market conditions, global graphite tantalum carbide coating companies are highly concentrated, and the companies are mainly American Momentive Technology and a few Japanese companies. In 2022, the market share of the global TaC coated graphite Susceptor TOP 3 companies will reach 99%.

The global Graphite Susceptor for Semiconductor Equipment market size was estimated at USD 647.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
