## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Grass-Fed Cheese competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Grass-fed cheese refers to cheese produced from the milk of cows, goats, or sheep that graze primarily on pasture rather than being fed grain-based diets. Typically, to qualify as "grass-fed," the animals' diet must consist of at least 70-100% grass, legumes, and forage, depending on local regulations or certification systems. The distinguishing feature of grass-fed cheese lies in its nutritional profile, environmental impact, and sensory qualities, which are all influenced by the natural diet of the livestock. Grass-fed milk used in cheese production generally has higher levels of omega-3 fatty acids, conjugated linoleic acid (CLA), beta-carotene, and fat-soluble vitamins such as A, D, and K2. These nutritional advantages, combined with the distinct flavor complexity derived from pasture botanicals, make grass-fed cheese a premium product in both artisanal and industrial dairy markets. From a production perspective, the grass-fed cheese market intersects with several growing trends in the global food industry: sustainability, health consciousness, and ethical sourcing. In many countries, particularly in North America, Europe, and parts of Oceania, dairy farmers have transitioned to regenerative and pasture-based systems that emphasize soil health, biodiversity, and carbon sequestration. These practices not only reduce dependency on external feed and fertilizers but also enhance the ecological sustainability of cheese production. In this context, grass-fed cheese represents a fusion of traditional craftsmanship and modern environmental responsibility, aligning with the expectations of consumers seeking authenticity and transparency in their food choices. In 2024, global Grass-Fed Cheese production reached approximately 149.2 K MT, with an average global market price of around US\$ 9.3 per kg. The global single-line production

capacity ranges from 5 to 10 K MT per year. The industry's gross profit margin is approximately 30%-35%.

The global Grass-Fed Cheese market size was estimated at USD 1387.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
