Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Grate-type Incinerators competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Grate-type Incinerators are mainly composed of reciprocating moving parts. The garbage is pushed onto the grate through the feeding device, and heated at high temperature in the furnace, so that part of the garbage is dried, and the movement of the grate pushes the garbage forward. At the same time, the garbage layer is loosened, and the fuel (garbage) is evenly passed through various stages such as drying, ignition, combustion and burnout, so that it is completely burned. There are many types of grates in mechanical grate incinerators. The main ones currently used are reverse push grates, forward push grates, drum grates, etc.; their main function is to make the grate do reciprocating mechanical movement, thereby driving the movement and flipping of domestic garbage. In 2024, global Grate-type Incinerators's average global market price of around Million US\$ 60-100 per unit.
