Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Grating Digital Display Indicator Calibrator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The grating indicator calibrator is a high-precision measuring device, mainly used to calibrate various indicators, such as dial indicators, micrometers, lever indicators, bore indicators, etc. The instrument uses photoelectric, mechanical and electronic technology and precise grating technology to semi-automatically or fully automatically calibrate various indicators according to national calibration regulations. Its working principle is based on the grating displacement measurement system. The motor drives the grating displacement, automatically collects data, measures the indication error and return error, and finally generates a calibration report. At present, there are many models of grating indicator calibrators on the market, and the prices vary depending on the functions and accuracy requirements. For example, the SJ2019 high-speed indicator automatic calibrator has a measurement range of 0-50mm, a resolution of 0.1 μ m, an indication error of \pm 1.0 μ m for any 2mm error, \pm 1.3 μ m for any 10mm error, \pm 1.5 μ m for any 30mm error, \pm 2.0 μ m for the entire range, and \pm 0.5 μ m for the return range. It is suitable for calibrating indicator meters, lever meters, bore meters and other indicator meters of various specifications. The price of this instrument varies in the market, and the specific price needs to be consulted according to the supplier and configuration. With the increasing demand for high-precision metrology equipment in the manufacturing industry, the market prospects for grating indicator calibrators are broad. According to the report of the Industry Research Network, the grating meter market continues to grow globally and is expected to continue to maintain steady growth in the next few years. In addition, with the continuous advancement of technology and the increase in market demand, the market demand for grating meters is also growing. In

the future, the development of grating meters will pay more attention to intelligence and high integration. For example, the use of artificial intelligence and big data technology can realize real-time data collection, processing and analysis, and provide more intelligent measurement solutions. At the same time, highly integrated grating meters will be able to integrate multiple measurement functions into one device, improving the convenience and accuracy of measurement.

The global Grating Digital Display Indicator Calibrator market size was estimated at USD 378.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
