Abstracts

Gravel cycling shoes are specialized footwear designed for gravel biking. They are built to handle the unique demands of riding on mixed terrains, including gravel roads, dirt paths, and light off-road sections. These shoes typically feature a combination of characteristics that make them suitable for this type of cycling. They often have a moderately stiff sole to provide a good balance between power transfer and comfort. The stiffness helps transfer the rider's pedaling force efficiently while still allowing some flexibility for walking or hiking when necessary. The upper is usually made of durable and breathable materials to keep the feet comfortable during long rides. Gravel cycling shoes also have a cleat attachment system compatible with gravel-specific or multi-purpose clipless pedal systems.

The global Gravel Cycling Shoes market size was estimated at USD 428.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
