Abstracts

Gravimetric hygrometers are precision instruments used for measuring absolute humidity by determining the mass of water vapor in a gas sample through direct weighing; they operate by passing a known volume of gas through a desiccant, measuring the weight gain, and calculating moisture content based on mass difference. These devices serve as primary standards in metrology due to their high accuracy and traceability to fundamental SI units, making them indispensable in calibration laboratories, scientific research, environmental monitoring, and industries requiring stringent humidity control, such as pharmaceuticals, semiconductors, and aerospace. While their adoption is limited by high cost, operational complexity, and the need for skilled personnel, they remain critical for validating secondary humidity sensors and ensuring measurement integrity in applications where even minor deviations can impact product quality, safety, or compliance with international standards.

The global Gravimetric Hygrometers market size was estimated at USD 52.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
