A Gravity Anchor is used in offshore engineering and construction. It relies on its weight to hold structures in place on the seabed rather than relying on mechanical penetration, like piles. Typically constructed from dense materials (such as concrete or steel) and filled with ballast, gravity anchors stabilize structures through the force of gravity pressing down on the seabed.

The global Gravity Anchor market size was estimated at USD 513.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
