Report Overview

The gravity foundation is one of the main foundation types in the offshore wind turbine supporting structure. It has a simple structure and mature application. It works similarly to the common extended foundation of onshore wind turbines. It mainly relies on the foundation and ballast weight to resist the upper wind turbine load and the external environment. The overturning moment and sliding force generated by the load keep the foundation and wind turbine tower structure stable.

The global Gravity Based Structures (Gbs) market size was estimated at USD 1250.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
