Abstracts

Gravity die casting (GDC) is one of the popular types among several die casting methods, which utilizes gravity to pour molten metal into a permanent mold. It is known for producing metal parts with intricate shapes and relatively smooth surfaces. Gravity die casting employs techniques like tilting the die to optimize molten metal flow and using sand cores to introduce voids or holes, enhancing the method's versatility for detailed component production. This adaptability makes it a favored manufacturing process for creating parts with complex internal geometries and undercuts. The gravity die-casting parts are suitable for metals like aluminum as they offer quality and production speed. Next, the machinery can range from fully automatic to manual casting. The choice depends on the complexity and production volume.

The global Gravity Die Casting Services market size was estimated at USD 24471.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
