Abstracts

The market for green ammonia manufacturing centers on the production of ammonia (NH₃) using renewable energy sources, such as solar, wind, or hydropower, to power the electrolysis of water for hydrogen production and the subsequent Haber-Bosch process, which combines hydrogen with nitrogen extracted from the air. Unlike conventional ammonia synthesis, which relies on fossil fuels?primarily natural gas or coal?and emits significant carbon dioxide, green ammonia is considered a carbon-neutral or low-carbon alternative, positioning it as a critical enabler for decarbonizing sectors like agriculture (as a fertilizer), energy (as a carbon-free fuel or hydrogen carrier), and industrial applications. This market is driven by global climate goals, government policies promoting green hydrogen and ammonia, corporate sustainability initiatives, and growing investment in renewable energy infrastructure, though it faces challenges related to high production costs, scalability of renewable integration, and the need for supportive regulatory frameworks and offtake agreements to ensure commercial viability.

The global Green Ammonia Manufacturing market size was estimated at USD 102.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 72.50% during the forecast period.
