Abstracts

Green cement and concrete refer to a category of building materials designed to reduce the environmental footprint of traditional cement and concrete production. These materials are characterized by lower carbon emissions during manufacturing, often achieved through the use of alternative raw materials such as industrial by-products (e.g., fly ash, slag, or silica fume), carbon capture technologies, or energy-efficient production processes. Some formulations also incorporate recycled aggregates or additives that enhance durability, reduce water usage, or enable carbon sequestration over the product's lifecycle. The goal is to maintain or improve structural performance while addressing sustainability concerns, including greenhouse gas emissions, resource depletion, and waste generation.
