Report Overview

Green chelates agents are biodegradable materials mainly used for washing or cleaning. These materials are primarily used in Laundry, surface care, detergents, and homecare. Common chelating agents are poorly biodegradable and there are concerns about their environmental effects. Heavy metals, which are very toxic for water and soil are used in these. Therefore, biotechnological approaches and computational tools are used to produce green chelating agents. The main area of application for this market is cleaning, which can be categorized into industrial cleaning and household cleaning. Industrial cleaning involves mechanical dishwashing, equipment cleaning, and others, where green chelates/natural chelating agents are used for the removal of metal ions. Household cleaning includes automatic dishwashing, laundry detergents, hand dishwashing, and surface cleaning.
