## Abstracts

Green Environmentally Friendly Silica is an alternative to traditional silica. The combustion of rice husks produces rice husk ash, which is mainly composed of silica. High-purity silica can be produced by controlled combustion after acid treatment. Green Environmentally Friendly Silica is mainly used in tires, industrial rubber, paints and coatings, animal feed and personal care. Green Environmentally Friendly Silica can be utilized as a renewable energy source through combustion or gasification processes. The ash generated from burning rice husks can be used to generate electricity or heat, contributing to sustainable energy production.

The global Green Environmentally Friendly Silica market size was estimated at USD 533.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
