## Abstracts

Green methanol is a clean energy source that utilizes renewable energy sources such as solar and wind energy to decompose water into green hydrogen, which is then synthesized by adding carbon dioxide to green hydrogen under the catalytic action. According to a research report by the Global Methanol Association, renewable hydrogen refers to the use of renewable energy to produce hydrogen, while renewable carbon dioxide refers to carbon dioxide from biomass sources or direct air capture of carbon dioxide. In fact, deliberately emphasizing the source of carbon dioxide is not very meaningful at present, because industrial carbon dioxide emissions such as flue gas cannot be blocked in a short period of time. The capture of carbon dioxide by flue gas and direct air capture of carbon dioxide have the same effect on carbon reduction. Global Methanol Synthesis Catalysts key players include Johnson Matthey, Clariant, BASF, Haldor Topsoe, Haohua Chemical Science&Technology etc. Global top five manufacturers hold a share over 50%. Asia-Pacific is the largest market, with a share about 65%, followed by Middle East and Africa. In terms of reaction condition, Medium Pressure is the largest segment, with a share about 37%. And in terms of synthesis process, the largest application is Coke Oven Gas, followed by Coal and Natural Gas.

The global Green Methanol Synthesis Catalysts market size was estimated at USD 1760.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
