## Abstracts

A greenhouse clip is a vital component in greenhouses, used to securely fasten soft film to the structure's framework. These clips, typically semicircular to prevent film tearing, are placed over the film along the gable ends and sides of the greenhouse, ensuring a firm grip without damaging the film. Some models include metal springs to enhance stability, especially in windy conditions. Special tools can be used for clip removal, preventing film damage. Greenhouse clips have versatile applications in various types of greenhouse operations such as agriculture, landscaping, and both home farming and gardening. They are particularly effective with strong films like agricultural vinyl. However, they are less suitable for PO film, which is more prone to tearing due to its lower strength. Besides films, these clips can also secure nets, such as insect or light-shielding nets, enhancing their functionality.

The global Greenhouse Clip market size was estimated at USD 196.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
