Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on GRG Access Doors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of GRG access doors was 12.7 million units, with an average price of US\$24 per unit. GRG Access Doors are access panels made from Glass Fiber Reinforced Gypsum (GRG), a lightweight, fire-resistant, and seamless material used primarily in architectural interior wall and ceiling applications. GRG combines gypsum (for smooth finishing and fire resistance) with fiberglass reinforcement (for strength and crack resistance), making it ideal for concealed access in drywall and plaster installations. The upstream supply chain for fiberglass reinforced gypsum (GRG) access doors mainly includes suppliers of high-strength ?-gypsum powder, alkali-resistant fiberglass mesh, and flame-retardant additives. Typical companies include Knauf Gypsum, Owens Corning Fiberglass, and Taishan Gypsum Raw Materials Department. Downstream demand is concentrated in building electromechanical installation companies, interior decoration general contractors, and prefabricated building units. Representative clients include China Construction Fifth Engineering Bureau Installation Company, Gold Mantis Decoration, and Yuanda Housing Industry. Downstream demand primarily comes from ceiling systems in commercial complexes, hospitals, airports, and high-end residences. GRG access doors, due to their high strength, non-deformation, flame-retardant Class A rating, and easy surface treatment, are rapidly replacing PVC aluminum alloy access panels. They maintain long lifespan and safety in large-area ceilings and form an integrated decorative system with GFRG ceiling panels, thereby improving construction efficiency and overall visual consistency. The industry trend is characterized by the accelerated penetration of GRG access doors in large public buildings and prefabricated interior

decoration, benefiting from increasingly stringent fire safety regulations and the growing demand for lightweight building ceilings. Driving factors include design firms' increased preference for Class A non-combustible materials, interior decoration companies' emphasis on integrated ceiling effects, and the standardization of prefabricated components driven by prefabricated construction. Obstacles mainly include the material's slightly greater weight compared to PVC, the need for stricter handling and reinforcement standards during construction, and price sensitivity in some regions due to insufficient awareness of GRG products. Furthermore, regional production capacity is concentrated in East and South China, and transportation radius limitations lead to higher costs for cross-regional supply, restricting rapid expansion. The annual production capacity of a single GRG access door production line is generally 50,000-80,000 sets, with an overall industry gross profit margin of 18-28%.

The global GRG Access Doors market size was estimated at USD 304.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
