Report Overview
Electric water heaters having two-way control capabilities with the grid are known as grid interactive water heaters (GIWHs). Energy storage in a GIWH proves to be economical, as its function is similar to a battery energy storage system, but at a much lesser cost. Typically, water usage in the residential sector, which holds the maximum share in the global GIWH market, is higher during mornings and evenings. As GIWH allows water to be heated as and when surplus power is available from the grid, it provides flexibility to the electric supply system and ensures cost savings. In addition, these heaters are a cost-efficient option even at the consumer end, as they pay for the surplus load rate, which is generally cheaper than the normal price. The global GIWH market is segmented based on end-user and geography. The key end-users identified in the report are residential and non-residential segments. The following exhibit represents the current market scenario and future projections of GIWH in each end-user segment.
Owing to the rising population and the economic growth, the demand for energy will highly increase. Emerging economies such as China, need high energy due to their rapid industrilization. Technavio’s market research report has identified growth in energy consumption as one of the primary factors that will fuel the growth of the grid-interactive water heater market in the coming years. With the high energy requirement more renewable energy sources are coming online is bound to significant impact on the consistency of the electricity. Increased consumption of electricity will lead more renewable power to come online which will increase the load of the grid and GIWH provides demand-side flexibility which stabilizes the grid. Owing to the increased consumption of energy, the grid-interactive water heater (GIWH) will witness growth.
