Report Overview:

Electric water heaters having two-way control capabilities with the grid are known as grid interactive water heaters (GIWHs). Energy storage in a GIWH proves to be economical, as its function is similar to a battery energy storage system, but at a much lesser cost. Typically, water usage in the residential sector, which holds the maximum share in the global GIWH market, is higher during mornings and evenings. As GIWH allows water to be heated as and when surplus power is available from the grid, it provides flexibility to the electric supply system and ensures cost savings. In addition, these heaters are a cost-efficient option even at the consumer end, as they pay for the surplus load rate, which is generally cheaper than the normal price. The global GIWH market is segmented based on end-user and geography. The key end-users identified in the report are residential and non-residential segments. The following exhibit represents the current market scenario and future projections of GIWH in each end-user segment.

The Global Grid-Interactive Water Heater Market Size was estimated at USD 275.06 million in 2023 and is projected to reach USD 356.15 million by 2029, exhibiting a CAGR of 4.40% during the forecast period.
