Report Overview

Electric water heaters having two-way control capabilities with the grid are known as grid interactive water heaters (GIWHs). Energy storage in a GIWH proves to be economical, as its function is similar to a battery energy storage system, but at a much lesser cost. Typically, water usage in the residential sector, which holds the maximum share in the global GIWH market, is higher during mornings and evenings. As GIWH allows water to be heated as and when surplus power is available from the grid, it provides flexibility to the electric supply system and ensures cost savings. In addition, these heaters are a cost-efficient option even at the consumer end, as they pay for the surplus load rate, which is generally cheaper than the normal price.
