Abstracts

The grinding machine filter system is a liquid filtration device specially used in the grinding process. It is mainly used to clean and filter the coolant or cutting fluid used in the grinding process to ensure the grinding quality and extend the service life of the equipment. Since the heat, grinding chips and metal dust generated in the grinding process may contaminate the coolant, it is necessary to remove these impurities through the filter system to keep the coolant clean, ensure the processing accuracy and reduce the wear of the equipment.

The global Grinding Machine Filter System market size was estimated at USD 277.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
