Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Grip Force Sensor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of grip force sensors was estimated at 70-100 million units, with an average selling price of approximately \$3-\$120 per unit and a gross profit margin of about 45%. Single-line production capacity was estimated at 2-5 million units per year. A grip force sensor is a core measuring element that converts the force generated by a human hand grasping or squeezing into a quantifiable electrical signal. The upstream of its industry chain mainly consists of suppliers of raw materials and core components such as metal elastomers, strain gauges, micro pressure sensing chips, and precision injection molded parts. The midstream comprises sensor manufacturing and packaging companies, responsible for designing, producing, and supplying finished products to downstream medical rehabilitation equipment manufacturers, sports equipment brands, and scientific research instrument companies, who then integrate and develop them into end products such as grip strength meters and rehabilitation assessment systems. Demand fundamentally stems from two main directions: first, the continuously growing demand for objective quantitative assessment in the healthcare field, such as precise tracking of patients' hand function recovery in hospital rehabilitation departments and early screening for sarcopenia in elderly care institutions; second, the professional drive in the fields of sports science and industrial design, such as monitoring athletes' grip strength training, assessing fitness enthusiasts' physical fitness, and verifying the ergonomics of consumer products.

The global Grip Force Sensor market size was estimated at USD 4250.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.00% during

the forecast period.
