## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Grooved Crosses competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Grooved Cross is a kind of important pipe fittings used in piping system, which belongs to one kind of grooved connection fittings. Its structure is characterized by an annular groove at the interface of the cross (i.e., ?cross-shaped? pipe fittings, used to connect four pipes, to achieve the diversion or merging of fluids in four directions), which are used in conjunction with matching grooved fittings (such as clamps, seals, etc.) to achieve rapid connection of pipelines by means of mechanical locking. The main function of grooved cross is to realize the split transmission of fluid in horizontal and vertical directions in piping system, which is commonly used in the scenarios where the fluid flow direction needs to be changed or the pipelines need to be branched, such as building water supply and drainage system, fire-fighting pipelines, industrial pipelines and so on. Its design advantages include: easy installation (no welding or threaded connections are required, reducing on-site machining processes), reliable sealing (sealing ring and clamp work together to form a sealing structure), can withstand a certain level of pressure (suitable for low and medium pressure piping systems), and is easy to dismantle and maintain. Through the standardized groove size and structure, groove cross can be quickly connected with pipes made of different materials (such as steel pipe, cast iron pipe, etc.), which improves the construction efficiency and reduces the installation cost, so it is widely used in modern pipeline engineering.

The global Grooved Crosses market size was estimated at USD 492.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the

forecast period.
