Abstracts

Ground alumina trihydrate (ATH) is an inorganic compound, chemically represented as $\text{Al}(\text{OH})_3$, which is produced as a finely ground, white, odorless powder derived from bauxite ore through the Bayer process. It serves primarily as a flame retardant and smoke suppressant across multiple industries, including plastics, rubber, coatings, and adhesives, due to its endothermic decomposition that releases water vapor when exposed to high temperatures, thereby cooling the material and diluting flammable gases. Additionally, it functions as a filler to enhance mechanical properties, improve electrical insulation, and provide resistance to tracking and corrosion, while also being valued for its non-toxic, halogen-free, and environmentally friendly characteristics.

The global Ground Alumina Trihydrate market size was estimated at USD 1125.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
