## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ground Ballscrews competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ground ballscrews are high-precision linear motion components that convert rotary motion into linear motion using a screw shaft and ball nut whose raceways are produced by precision grinding after heat treatment, enabling ultra-high accuracy, low backlash, smooth motion, and excellent repeatability, typically used in CNC machine tools, semiconductor and electronics manufacturing equipment, robotics, aerospace, medical devices, and other applications requiring tight tolerances, high stiffness, and superior surface finish. The ground ballscrew industry chain begins upstream with high-purity alloy steel, bearing steel, precision steel bars, grinding wheels, precision machining tools, ball bearings and heat-treatment services, moves midstream through specialized manufacturers that perform heat treatment, ultra-precision grinding of raceways, thread grinding, nut machining, ball selection, preloading and dynamic accuracy testing, and extends downstream to CNC machine-tool OEMs, semiconductor equipment producers, robotics integrators, medical and aerospace system manufacturers, and global distributors, who integrate ground ballscrews into high-precision motion platforms, feed axes and actuators demanding ultra-high controllability, rigidity and durability. Ongoing and planned projects for ground ballscrews include capacity expansion and high-precision machining line upgrades by leading Japanese, European and Chinese manufacturers to support semiconductor equipment growth, new investments in automation-intensive grinding and measurement systems to improve consistency and reduce labor cost, localization projects in China, Korea and India aimed at replacing imported ultra-precision products, the establishment of new grinding centers in Southeast Asia and Eastern Europe aligned with

manufacturing relocation trends, and R&D initiatives targeting higher-speed, lower-noise, longer-life ground ballscrews for advanced robotics, precision instruments and next-generation CNC platforms. 2024 Global Market sales Volume: 13 million units, Average Global Market Price: 92 USD per unit, Market Average Gross Profit Margin: 20%.

The global Ground Ballscrews market size was estimated at USD 1196.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
