Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ground Improvement Equipment competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of ground improvement machines reached 15,862 units, with an average selling price of \$4,326 per unit. Ground improvement machines are construction equipment used to improve the surface and underlying soil layers, aiming to increase foundation bearing capacity, reduce settlement, and improve geological conditions to accommodate the load requirements of the superstructure. Compared to foundation improvement machines (which generally work on deeper foundations), ground improvement machines focus more on surface and near-surface processes and are commonly used in urban renewal, site leveling, drainage improvement, waterproofing, anti-seepage, and anti-floating applications.

The global Ground Improvement Equipment market size was estimated at USD 227.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
