Abstracts

Ground screw pile anchor is an anchoring device that is screwed directly into the soil through a screw pile structure. It is usually made of high-strength steel and has the characteristics of self-drilling into the soil and forming a close contact. Its spiral blades provide stable support and anti-pulling force during the screwing process. It is widely used in foundation fixing, structural support, temporary facility construction and other fields. Especially in environments where traditional drilling and concrete pouring cannot be used, it has the advantages of fast, economical and efficient installation.

The global Ground Screw Pile Anchor market size was estimated at USD 889.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
