Report Overview

Grounding bars and rods are components of grounding systems used in industrial, commercial, and residential building or infrastructure. Grounding bars are metal brackets made of conductive materials, such as copper and galvanized steel, which serve as a central grounding point for equipment. These bars and rods provide a conductive path for electricity to flow through them. Grounding rods are the end point of grounding systems. The conductivity and service life of products depend on the thickness of the coating. Typically, the length of the rod is 8' and the thickness of the rod is from 3/8" to 1".
