Abstracts

The intelligent group dining platform is a comprehensive service platform that leverages advanced technologies such as the Internet of Things, artificial intelligence, big data, and cloud computing to systematically and intelligently manage and optimize the entire group dining process (including ordering, production, delivery, pickup, payment, and feedback). It aims to improve meal delivery efficiency, ensure food safety, reduce operating costs, and enhance the dining experience. It also supports nutrition and health management, intelligent meal scheduling, supply chain collaboration, and data-driven decision-making. It is widely used in collective dining scenarios such as schools, businesses, hospitals, and industrial parks. The platform's downstream customers primarily include enterprises, institutions, schools, hospitals, factories, and government agencies, which require large-scale catering services. These downstream users use the platform to implement online group meal ordering, menu management, nutritional pairing, delivery scheduling, and payment settlement, thereby improving catering management efficiency and ensuring food safety and nutritional balance. The platform also provides data analysis and operational support for catering companies, central kitchens, and delivery services, helping downstream users optimize meal plans, reduce operating costs, and enhance the dining experience and service quality, achieving standardized, intelligent, and digital management of group dining services. The platform's gross profit margin is approximately 53%. As a key enabler of the catering industry's digital transformation, intelligent group dining platforms are driving traditional group dining towards efficiency, intelligence, and standardization. By integrating online ordering, nutrition management, intelligent scheduling, supply chain optimization, and delivery scheduling, these platforms not only improve catering management efficiency and food safety for organizations like businesses, schools, hospitals, and factories, but also optimize menu offerings through big data analysis, reduce operating costs, and enhance the dining experience. Leveraging artificial intelligence, the Internet of Things,

and cloud computing, these intelligent group dining platforms enable real-time monitoring, predictive scheduling, and personalized service, shifting catering operations from traditional experience-based management to data-driven management. Furthermore, these platforms provide technical support and operational empowerment for central kitchens, delivery companies, and catering service providers, driving collaboration and upgrades across the entire group dining industry chain. In the future, as consumer demand for healthy food and high-quality service grows, intelligent group dining platforms will become a core pillar for sustainable, efficient, and intelligent operations in the group dining industry.
