The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Grouting Defect Display Instrument competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A grouting defect indicator is a device used to detect and display the quality of grouting operations in buildings or engineering projects. It is primarily used to identify defects that may occur during the grouting process, such as voids, cracks, air holes, or uneven grouting. By utilizing non-destructive testing technologies such as acoustic, ultrasonic, and electromagnetic waves, the grouting defect indicator monitors the filling effect and density of the grouting material in real time, displaying the results through a visual interface. This helps engineers promptly identify and repair problems, ensuring the stability and safety of the project structure. Sales in 2024 will be 229,000 units, with an average price of US\$680 per unit. The single-line production capacity of this product is about 50,000 units. The gross profit margin is 52%.
