Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on GRP Control Stations competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Globally, the production of GRP (Glass Reinforced Polyester) Control Stations reached approximately 865,000 units in 2024, with an average selling price of \$1,250 per unit. This is a professional industrial control equipment enclosure manufactured from glass fiber reinforced polyester composite material, delivering exceptional corrosion resistance, ultraviolet radiation resistance, impact strength, and electrical insulation performance. These control stations are extensively implemented in motor control centers, instrumentation monitoring systems, and electrical power distribution networks within highly corrosive operational environments including chemical processing facilities, offshore drilling platforms, water treatment plants, and food manufacturing installations. Their non-metallic composition eliminates galvanic corrosion risks, while the reduced mass enables simplified installation procedures, complying with stringent protection classifications such as IP66 and NEMA 4X standards.

The global GRP Control Stations market size was estimated at USD 1082.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
