Abstracts

GSM cutters, also known as fabric cutters or fabric sample cutters, are tools specifically designed for cutting fabric samples to determine their grammage or GSM (grams per square meter). These cutters are widely used in textile manufacturing, quality control, and research laboratories to measure and assess the weight or density of fabrics accurately. GSM cutters typically consist of a cutting blade, a base or cutting mat, and an adjustable cutting area or template. They allow users to cut fabric swatches of a specific size, usually in the shape of a square or rectangle, ensuring uniformity and consistency when measuring the weight of the fabric.
