Abstracts

Guided bone regeneration (GBR) and guided tissue regeneration (GTR) are dental surgical procedures that use barrier membranes to direct the growth of new bone and gingival tissue at sites with insufficient volumes or dimensions of bone or gingiva for proper function, esthetics or prosthetic restoration. Guided bone regeneration typically refers to ridge augmentation or bone regenerative procedures; guided tissue regeneration typically refers to regeneration of periodontal attachment. GTR/GBR Membrane leads to gaps that form between the teeth and bone. These gaps, or bony defects, often need to be treated with a separate procedure known as a bone graft. This is where material is placed into the defect to promote new bone growth. The growing demand for dental implants and periodontal regenerative therapies is a significant driver for the Guided Tissue Regeneration (GTR) and Guided Bone Regeneration (GBR) membrane market. These membranes are crucial in promoting tissue and bone regeneration, allowing for the successful implantation of dental implants and improving the outcomes of periodontal disease treatments. As the global population ages, the need for restorative dental treatments has increased, fueling demand for GTR and GBR membranes. Additionally, advancements in membrane materials, such as collagen, resorbable polymers, and synthetic options, have enhanced their effectiveness, biocompatibility, and ease of use, further accelerating market growth. One of the major challenges facing the GTR and GBR membrane market is the high cost of these regenerative treatments, which can limit their accessibility, particularly in developing regions. Additionally, there can be complications with the technique, such as membrane exposure, infection, or inadequate tissue regeneration, leading to suboptimal results. While the effectiveness of these membranes is well-established, the variability in patient conditions, the complexity of the procedures, and the requirement for highly skilled dental professionals can hinder broader adoption. Regulatory barriers and the need for rigorous clinical trials to prove the safety and efficacy of new membrane materials can

also slow the pace of innovation in the market. North America is the largest consumption place, with a consumption market share nearly 35% in 2023. Following North America, Asia-Pacific is the second largest consumption place with the consumption market share of 30%. Market competition is intense. Geistlich, Zimmer Biomet, Yantai Zhenghai Bio-tech, Botiss Biomaterials, Danaher Corporation, etc. are the leaders of the industry, with high-end customers. The top five manufacturers held 63.54% of the market, in terms of GTR/GBR Membrane revenue in 2023.

The global GTR or GBR Membrane market size was estimated at USD 410.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
