## Abstracts

Guard Tour System is a security system used to scientifically and standardizedly manage patrol inspections by patrol personnel. A series of patrol points are set up in the areas or routes that need to be patrolled, which can be radio frequency cards, QR codes, Bluetooth beacons, etc. Each patrol point has a unique identifier. Patrol personnel hold patrol equipment, such as patrol sticks, smart phones, etc., and patrol according to the specified route and time. When arriving at the patrol point, the patrol equipment is used to read the information of the patrol point, and the patrol equipment will automatically record the identification of the patrol point, reading time and other data. After the patrol is completed, the data in the patrol equipment is uploaded to the management software on the computer or server through the communication cradle, data cable, wireless network, etc. The management software analyzes and processes the data, compares it with the pre-set patrol plan, and generates various statistical reports, such as patrol missed inspections and delayed inspection reports, so that managers can understand the completion of the patrol work.

The global Guard Tour System market size was estimated at USD 516.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
