Abstracts

Guided Wave Ultrasonic Non-Destructive Testing (GWUT) is an advanced inspection technique used to detect corrosion, cracks, and other defects in pipelines and tubular structures without requiring full access to the entire surface. Unlike conventional ultrasonic testing that relies on direct contact and localized scanning, GWUT utilizes low-frequency ultrasonic waves that travel along the length of a structure?guided by its geometry and material?allowing inspection of tens of meters from a single test location. These guided waves, typically generated circumferentially using a ring of transducers, can propagate in both directions through coatings, insulation, or even buried sections of pipe, making the method ideal for inaccessible or hard-to-inspect areas. GWUT provides a cost-effective and efficient screening tool in industries such as oil and gas, petrochemical, and power generation, offering a high probability of detection for generalized or localized wall loss with minimal disruption to operations.

The global Guided Wave Ultrasonic Non Destructive Testing market size was estimated at USD 1025.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
