### Report Overview:

Gum arabic, also known as acacia gum, char gund, char goond, or meska, is a natural gum made of hardened sap taken from two species of the acacia tree; *Senegalia (Acacia) senegal* and *Vachellia (Acacia) seyal*.

Gum arabic is used primarily in the food industry as a stabilizer. It is edible and has E number E414. Gum arabic is a key ingredient in traditional lithography and is used in printing, paint production, glue, cosmetics and various industrial applications, including viscosity control in inks and in textile industries, although less expensive materials compete with it for many of these roles.

While gum arabic is now produced mostly throughout the African Sahel, it is still harvested and used in the Middle East. For example, Arab populations use the natural gum to make a chilled, sweetened, and flavored gelato-like dessert.

In this report, we separate the gum arabic (E415) into raw grade gum arabic and refined gum arabic in the data section.
