Abstracts

Gun drilling machine tools are suitable for deep hole drilling operations with a large aspect ratio, such as cylinders, shaft parts and molds. Gun drilling machine tools use a single-tube internal coolant system, which directly delivers coolant through the center of the drill bit to ensure effective cooling and lubrication of the cutting area, while helping to remove chips smoothly. The built-in coolant channel can accurately deliver coolant to the cutting edge, remove heat and chips, keep the cutting edge sharp, and significantly improve drilling efficiency and tool life. The efficient chip removal design reduces the risk of blockage and ensures stable processing.

The global Gun Drilling Machine Tools market size was estimated at USD 10240.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
