Abstracts

Gynecological dilators are medical devices designed for therapeutic and diagnostic purposes in the management of gynecological conditions, primarily involving the gradual and controlled dilation of the vaginal canal or cervical opening to address issues such as vaginismus, vaginal stenosis, post-radiation therapy scarring, or preoperative preparation for procedures like hysteroscopy. These instruments are typically made from medical-grade materials like silicone, plastic, or metal and come in graduated sizes to allow for progressive stretching, thereby reducing pain, improving tissue elasticity, and restoring functional capacity.
