Abstracts

Gynecological LEEP Knife is a professional surgical tool used for minimally invasive diagnosis and treatment of cervical diseases. It uses directional radio frequency wave emission technology. After contacting body tissue, the tissue itself generates impedance, so that the water molecules in the target tissue are instantly oscillated and activated under the action of radio frequency waves, causing cells to rupture and evaporate, and it can achieve cutting, hemostasis, electrocautery, ablation, electrocoagulation and other functions at a low temperature of 40?~70?. Gynecological LEEP Knife has small trauma, less bleeding, fast recovery and high accuracy. It is mainly used to treat cervical intraepithelial neoplasia, especially high-grade lesions, chronic cervicitis and other gynecological diseases.
