The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Gypsum Soil Conditioner competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Gypsum soil conditioner is a soil conditioner made from natural gypsum or industrial by-product gypsum (such as desulfurized gypsum and phosphogypsum) as the main raw materials, through physical or chemical treatment. Its core functions include: neutralizing saline-alkali soil (replacing sodium ions), improving soil structure (increasing porosity), providing calcium and sulfur nutrients (containing Ca 20-24%, S 18-22%), and passivating heavy metals (such as cadmium and lead). It is suitable for the restoration of saline-alkali land, acidified soil and compacted soil, and is both environmentally friendly and economical. It is an important input for sustainable agriculture.

The global Gypsum Soil Conditioner market size was estimated at USD 681.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
