## Abstracts

A gyro compass is a type of non-magnetic compass which is based on a fast-spinning disc and the rotation of the Earth to find geographical direction automatically. Unlike magnetic compasses, which point towards the magnetic North Pole, a gyro compass points towards the true North Pole, or geographical North, providing a significantly more accurate navigation tool for maritime applications. Although an important part of the gyro compass is the gyroscope, they are not the same equipment. Global key players of Gyro Compass include Raytheon Ansch?tz, YDK Technologies, TOKYO KEIKI INC., etc. The top three players hold a share over 42%. Europe is the largest market, and has a share about 35%, followed by Asia-Pacific and North America with share 31% and 26%, separately. In terms of product type, Fiber Optic Gyro Compass is the largest segment, occupied for a share of 69%. In terms of application, Commercial Shipping has a share about 43 percent.

The global Gyro Compass market size was estimated at USD 240.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
