Report Overview

Gyroplane, also known as a gyrocopter, is an aircraft that optically resembles a helicopter. Contrary to a helicopter, a gyrocopter also features a propeller that provides forward thrust. And unlike a helicopter, the gyrocopter's rotor is not engine-powered during flight, but merely passively powered by airstream that results from the forward propulsion. This is the so-called autorotation. Because of their lightweight and compact construction, gyrocopters are classified as Ultralight Aircrafts, which leads to considerable cost advantages of flight operations and also with regard to obtaining a flight license.

The global Gyroplanes market size was estimated at USD 56 million in 2023 and is projected to reach USD 67.52 million by 2032, exhibiting a CAGR of 2.10% during the forecast period.
