The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hair Dryer Built-In Motor Drive MCU competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The hair dryer's built-in motor drive MCU is a microcontroller integrated inside the hair dryer for directly controlling the speed, temperature protection and power management of the brushless or brushed motor. It usually includes motor drive peripherals, PWM modulation, overcurrent and overtemperature protection, and a simple communication interface. The global sales of this type of MCU are estimated to be approximately 22 million units in 2024, with an average unit price of approximately US\$8.5 per unit in 2024. The annual production capacity of a single line is approximately 1.2 million units. The upstream of the supply chain is semiconductor design and foundry, power device and passive component suppliers, and PCB and packaging testing manufacturers. The downstream is hair dryer manufacturers, home appliance brands, and after-sales maintenance service providers. The typical gross profit margin is about 44%, and the upstream material consumption of each product produced is approximately 0.02 kg, including the core itself. , a small amount of passive components and PCB packaging materials, the downstream consumption of one MCU is that of a hair dryer, and the average consumption during its life cycle is one MCU. The product cost structure is roughly as follows: raw material and core procurement accounts for about 55%, chip mounting and assembly manufacturing costs account for about 15%, testing and quality inspection accounts for about 5%, R&D and firmware development accounts for about 8%, sales and marketing account for about 9%, packaging and logistics account for about 8%. According to parameter classification, the product can be divided into low-frequency control type and medium- and high-frequency control type according to main frequency and computing power, MCU-only type and

integrated gate drive type according to output and driving capability, square wave simple control type and sine wave vector control type according to control strategy, basic type and smart interconnected type with communication or smart energy-saving function according to function.

The global Hair Dryer Built-In Motor Drive MCU market size was estimated at USD 187.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
