Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Halide Promoters competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Halide promoters are additives containing halogen elements (e.g., chloride, bromide, iodide, fluoride) introduced into catalyst systems. While they are not catalytically active themselves, halide promoters modify catalytic performance by altering electronic properties, active-site coordination, acidity/basicity, or intermediate stabilization, ultimately enhancing activity, selectivity, or stability.

The global Halide Promoters market size was estimated at USD 105.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
