Abstracts

Halogen-free data cables are specialized communication cables designed to minimize fire hazards and toxic emissions by eliminating halogenated compounds, such as chlorine and bromine, from their insulation and jacketing materials; instead, these cables use alternative flame-retardant materials like phosphorus-based compounds, metal hydroxides, or nitrogen-based additives, which reduce smoke opacity and corrosive gas emissions during combustion, making them essential for applications in enclosed or high-occupancy environments such as data centers, public transportation systems, healthcare facilities, and commercial buildings where enhanced fire safety and environmental regulations are stringent.

The global Halogen Free Data Cable market size was estimated at USD 1245.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
