## Abstracts

Halogen Free Refrigerants refer to refrigerants that do not contain halogen elements. Halogen elements include fluorine, chlorine, bromine, iodine, etc. These elements usually play the role of flame retardant and change the physical state of matter in refrigerants. However, halogen refrigerants have a destructive effect on the ozone layer and have a certain impact on the environment. Therefore, halogen-free refrigerants are seen as a more environmentally friendly alternative. With the increasing environmental awareness, the demand for Halogen Free Refrigerants will continue to increase. Since Halogen Free Refrigerants have no destructive effect on the ozone layer and have less impact on the environment, more industries and fields will start to use Halogen Free Refrigerants in the future.

The global Halogen Free Refrigerants market size was estimated at USD 423.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
