Abstracts

Halogen-free solder paste refers to a specialized type of soldering material used in electronics manufacturing that is formulated without the inclusion of halogens?specifically chlorine (Cl), bromine (Br), fluorine (F), and iodine (I)?or their compounds, which are commonly used as flame retardants or activators in conventional solder pastes. The absence of these substances minimizes the emission of toxic and corrosive fumes during reflow soldering, reduces environmental impact, and aligns with stringent international regulations such as the EU's Restriction of Hazardous Substances (RoHS) and Waste Electrical and Electronic Equipment (WEEE) directives, making it particularly essential for producing eco-friendly and high-reliability electronic assemblies in sectors like automotive, aerospace, medical devices, and consumer electronics where safety and sustainability are prioritized.

The global Halogen Free Solder Paste market size was estimated at USD 420.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
